1 - Overview

This report provides an assessment of the Azure Active Directory environment, including cross application configurations along with users and groups. The Azure AD forms the basis of access control and global configuration for the Microsoft Cloud. In some cases, Azure AD is used in conjunction with on-premise Active Directory in a hybrid configuration. This report documents the various configuration settings and entities for audit purposes and can be used as point in time documentation for disaster recovery purposes.

2 - Organization

The organization is the highest-level entity in the Microsoft Cloud and represents the owner of the Azure AD environment. Below is a listing of the general contact information of the organization along with the configured technical notification email. Please ensure the information is accurate and up to date to avoid misdirected notices and delays in communication of key account and infrastructure issues.

Display Name	MYCO
Street	100 Appian Way
State	CA
City	Beverly Hills
Postal Code	90210
Country	US

Technical Notifications sent to:

- it@supportOrg.com

3 - Domains

The organization can support multiple domains both external and internal. Domains are required to be verified before they can be actively used. Verification can be done through multiple techniques, including special external DNS records. The primary default domain is highlighted in bold. Authentication be managed directly by Azure AD or federated.

DOMAIN	PARENT DOMAIN	AUTHENTICATION TYPE	IS ADMIN MANAGED	IS DEFAULT	IS INITIAL	IS ROOT	IS VERIFIED
myco.com		Managed	Yes	Yes	No	Yes	Yes
myco.onmicrosoft.com		Managed	Yes	No	Yes	Yes	Yes

4 - Supported Services

One or more services can be supported by the Azure AD environment per domain. The table below lists all managed domains and the supported services. The most common supported service is Email, which allows the sending and receiving of emails both internally and externally.

DOMAIN	SUPPORTED SERVICES
myco.com	Email;Office Communications Online;Intune
myco.onmicrosoft.com	Email;Office Communications Online

5 - On Premise Sync

Some configurations of Azure AD involve on-premise domain controllers where settings from the cloud are synced to and from. If On Premise Sync is enabled, the last time is documented here. If the last sync time is greater than 15 days, it is highlighted in red, possibly indicating syncing issues or a misconfiguration and should be investigated.

PROPERTY	SETTING
On Premise Sync Enabled	Yes
On Premise Sync Last Synced	2021/01/10 4:00:00 PM -05:00

6 - Applications

Beyond standard Microsoft services, the Microsoft Cloud and Azure AD can support custom applications. These applications become part of the Azure AD and may have direct access to certain resources that are part of the Microsoft Cloud infrastructure. It is important to periodically review applications to ensure that the minimum necessary are installed and configured properly.

DISPLAY NAME	APP ID	SIGN IN AUDIENCE	IS FALLBACK PUBLIC CLIENT
Backup Application bONX	b5df0952-3fe3-547f-9f65-1a39dff1cc9	My Org	
Backup Application FGO8	e32e039f-d8b5-536b-bbe0-c67b26cce61d	My Org	
Backup Application MDpV	50daa7ef-9652-5e0f-a477-b8a039a12b68	My Org	
Backup Application OmHL	d1ff0de2-0f66-5dc0-a4c4-c33ffe239cfb	My Org	
Microsoft 365 Backup	17106e97-f7aa-5f18-b226-8d1e760847c0	My Org	
P2P Server	be5c4a99-f633-5dc7-9f17-b4f5fba2f9cf	My Org	No
Verkada Command	f4e7c1dd-7bea-5be3-adb1-a46bfe20fb90	My Org	No

7 - Web URLs

Web URLs can be published by Azure AD for custom applications. Three primary URLs can be specified including a Home Page URL, Redirect URIs, and a Logout URL. These are typically configured by the administrator when installing the application. Periodic audits of Web URLs are highly recommended to avoid misconfiguration due to human error and to ensure malicious applications do not direct users to non-approved sites.

APPLICATION	HOME PAGE URL	REDIRECT URIS
Backup Application bONX		https://usw.dropmyemail.com/en/ms_oauth_callback
Backup Application FGO8		https://usw.dropmyemail.com/en/ms_oauth_callback
Backup Application MDpV		https://usw.dropmyemail.com/en/ms_oauth_callback
Backup Application OmHL		https://usw.dropmyemail.com/en/ms_oauth_callback
Verkada Command	https://vauth.command.verkada.com/saml/sso/*?metadata=verkadacommand SV9.2 primary z	

8 - Organization Contacts

Organization contacts represent external email addresses that are managed and can be used in the Azure AD environment. These entities exist alongside standard users and groups and are often seen globally. It is important to ensure organization contacts are configured to the proper external email addresses and authorized.

DISPLAY NAME	MAIL	MAIL NICKNAME	GIVEN NAME	SURNAME

9 - Proxy Addresses

The following table lists proxy addresses for various mail accounts. If Azure AD is being synchronized with an external Active Directory, a set of Azure AD settings govern whether the addresses are synchronized or not. Proxy addresses can contain various address entry types including SMTP addresses, X500 addresses, SIP addresses, as well as others.

10 - Service Plans

The following table lists the various service plans available the organization and their provisioning status. Plans can be applied to company, group, or user levels as indicated in the table below. Success indicates that the plan was properly provisioned and is available for use with the target entities. Please note that the availability of a plan does not mean the actual use of licenses of the plans.

12 - Partner Relationships

The following table lists the Partner Relationships along with their Contract Type. These partners could have permissions to manage the products and services for the organization. It is important to periodically review the Partner Relationships to ensure there is no unauthorized access by other companies.

Partner Relationship Table is not available.

13 - Groups

Groups are used for various purposes in the Microsoft Cloud, including mail distribution groups, security groups, and Microsoft Teams. Groups that have the Mail Enabled property active can be emailed internally and externally depending on the visibility. Traditional Active Directory groups can be mapped to Azure AD groups by looking at the Mail Enabled and Security Enabled settings. Security groups will have Mail Enabled set to No and Security Enabled set to Yes. Mail Enabled security groups will have Mail Enabled set to Yes and Security Enabled set to Yes. Distribution groups have Mail Enabled set to Yes and Security Enabled set to No.

The list of groups should be reviewed on a periodic basis to ensure settings and visibility are configured properly, as well as to reduce the number of groups to the minimum necessary to avoid security risks.

13.1 - Cloud Only

13.2 - On Premise Synced

On Premise Synced Groups Table is unavailable.

14 - Users

Users represent the base level accounts in Azure AD. Users are typically associated with people, but may be used for shared accounts, emails accounts, and users required for application access. The management of users to the minimum necessary is crucial to the security of any environment. The user list should be reviewed periodically to ensure that no terminated users or unnecessary accounts are still active in the list of users.

Users shown having MFA Enabled may be different from amounts reported by Microsoft because of differences in calculations.

Last login date based on data collected and synced with Microsoft. Logins within the last 24 hours may not have synced prior to scan.

Premium subscription to Azure Active Directory required to retrieve additional user data including MFA enabled/disabled and Last Login details.
