# Overall Health

The overall risk to the environment is measured by the number of issues detected. An ideal environment would have a Health Score of 0 (indicating no risks found). The higher the score, the more likely a security, availability, or performance related incident will occur.

The most recent scan was performed 10-Oct-2023. The previous scan was performed 10-Oct-2023. The overall Health Score of the environment remains the same as the previous period.

## Health Score

# Resolved Issues

---

No issues were resolved between 10-Oct-2023 and 10-Oct-2023.

# Unresolved Issues

## High Risk

### RISK FACTORS

#### **Failed Jobs ( past 30 days)**

> 0 (1 failed jobs )

**Recommendation:** Failed jobs may include critical maintenance tasks and should be reviewed.

**Number Affected:** 1

#### **Signal Waits**

Above 10%

**Recommendation:** Signal Waits at a rate above 10% indicate the need for more CPU power.

**Number Affected:** 1

#### **TempDb Placement**

Not on Isolated Drive

**Recommendation:** TempDb should be placed on isolated drive to reduce I/O congestion

**Number Affected:** 1

#### **Data and Log File Placement**

On same drive

**Recommendation:** Data and Log files should be placed on separate drives to reduce I/O congestion.

**Number Affected:** 1

#### **Backup Compression Default**

Not Enabled

**Recommendation:** Backup compression helps save size on the target drives by compressing backups and reduces the time of the backup window. In most cases, enabling this feature is desired.
