

# Document IT Security Using Policies & Procedures Reports

When it comes to delivering IT security to your clients, does everyone in your organization know **WHAT** they are supposed to do, and **HOW** they are supposed to do it?

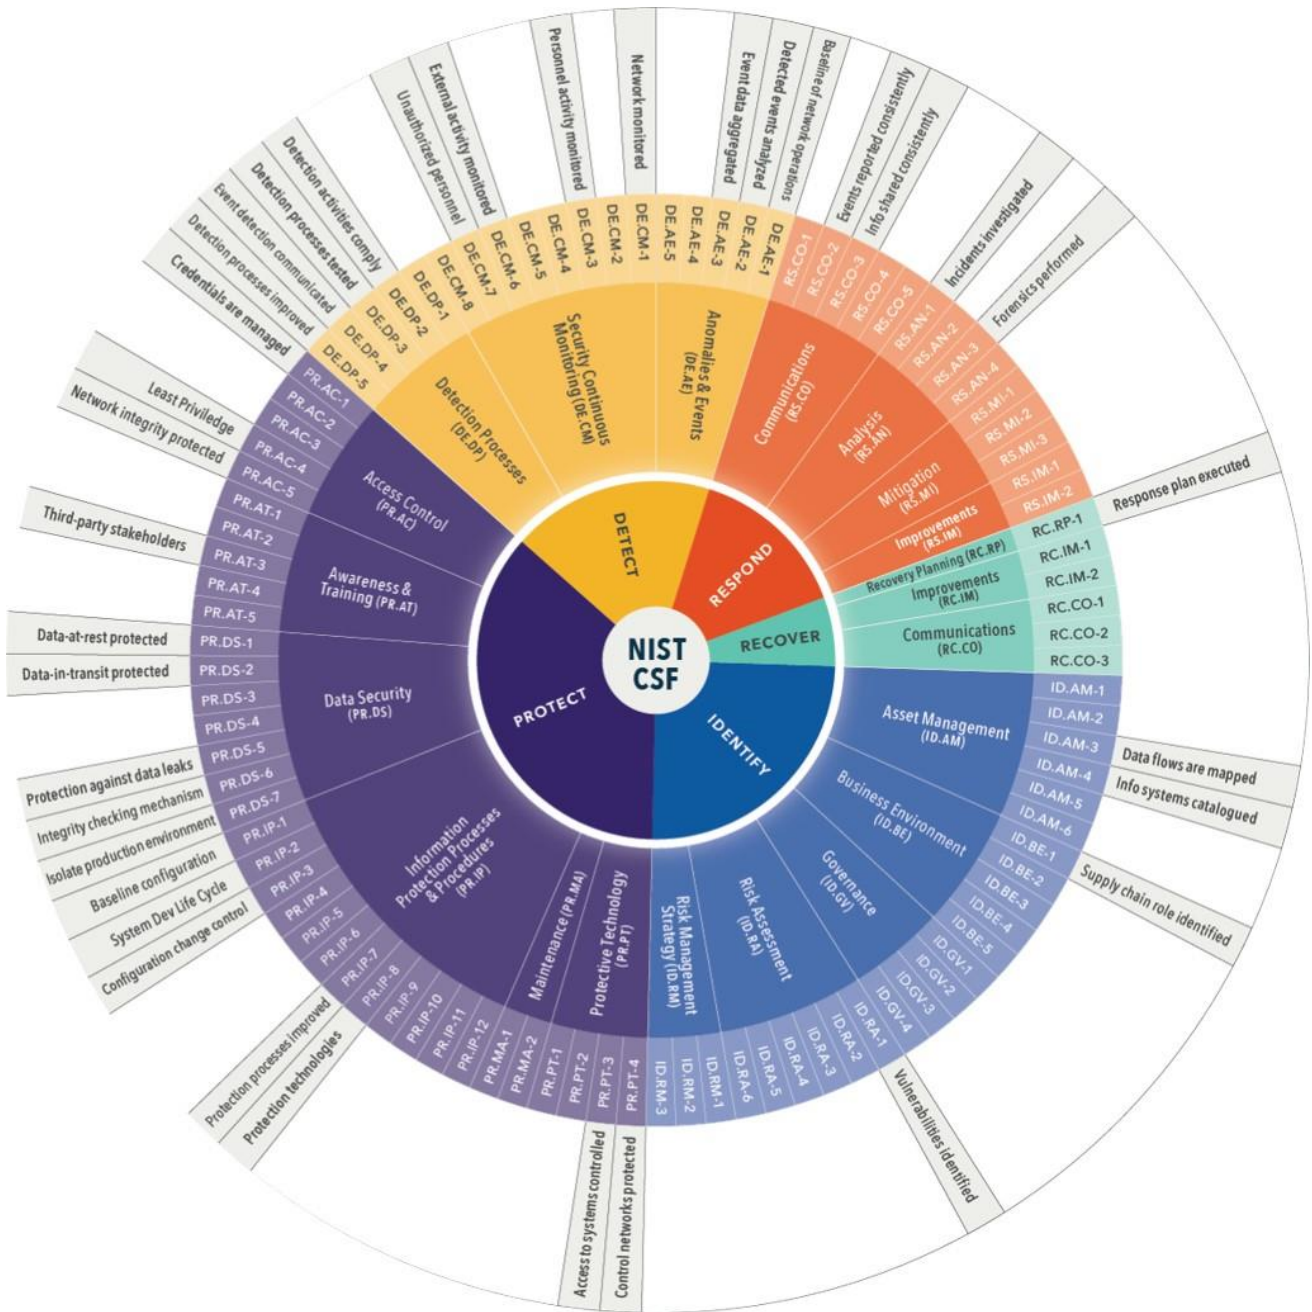

If a company is ever audited, investigated, or sued, the MSP will be asked to provide a copy of the IT security policies and procedures manual, detailing the security measures the company follow and how they are followed. The manual is accompanied by the Evidence of Compliance proving that the policies are followed properly.

While many MSPs are doing the right things when it comes to providing IT security, few have the time or resources to develop and maintain a formal cybersecurity policies and procedures manual.

The NIST CSF Policies & Procedures Manual is designed to be comprehensive and practical to implement. The report includes a table of contents, NIST CSF Policy Roadmap, and detailed policy and procedure descriptions for each discrete component of the entire framework.

The NIST CSF Policies and Procedures Manual is included as a standard report within Compliance Manager at no additional cost. The report is integrated into the product's branding engine, allowing MSPs to include their company logo and colors, and are fully editable.

# Drilling Down Into Details

The NIST CSF Policies & Procedures Manual is organized around the NIST Cybersecurity Framework, with each section of the manual mapped to the specific provisions of the Framework. MSPs can review the policies and easily eliminate those that don't apply or edit the procedures to indicate preferred tools or methodologies.
