

Prove Your Value with Progress Reports

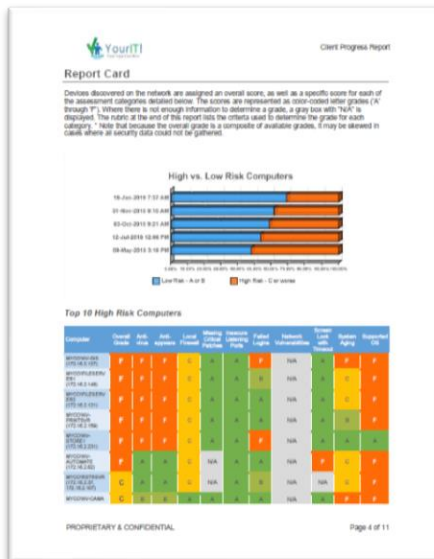

Network Detective Pro Progress Reports are a great way for MSPs to showcase their value to clients. The reports include a variety of easy-to-follow charts and graphs that illustrate ongoing improvements to clients' security profiles and support the need for clients to invest in additional resources.

The "Report Card" summary provides a risk score for all computers on a network, while the User & Computer Growth Trend graph offers period-to-period measurement of the MSP's work over time. Additional trending graphs are available, as well as details on issues that have been resolved.

COMPREHENSIVE

Features the Risk Report Card, User & Computer Growth Trend, Security Issues Addressed, Scorecard Improvement Details, External Vulnerabilities Details and more.

CUSTOMIZABLE

MSPs can customize reports by adding or removing sections. Custom boilerplate text can be added to a template, which can be saved and automatically reproduced.

COMPELLING

Regular reporting allows MSPs to demonstrate the value of their services, improving client retention and providing opportunities to sell additional services to meet client needs.

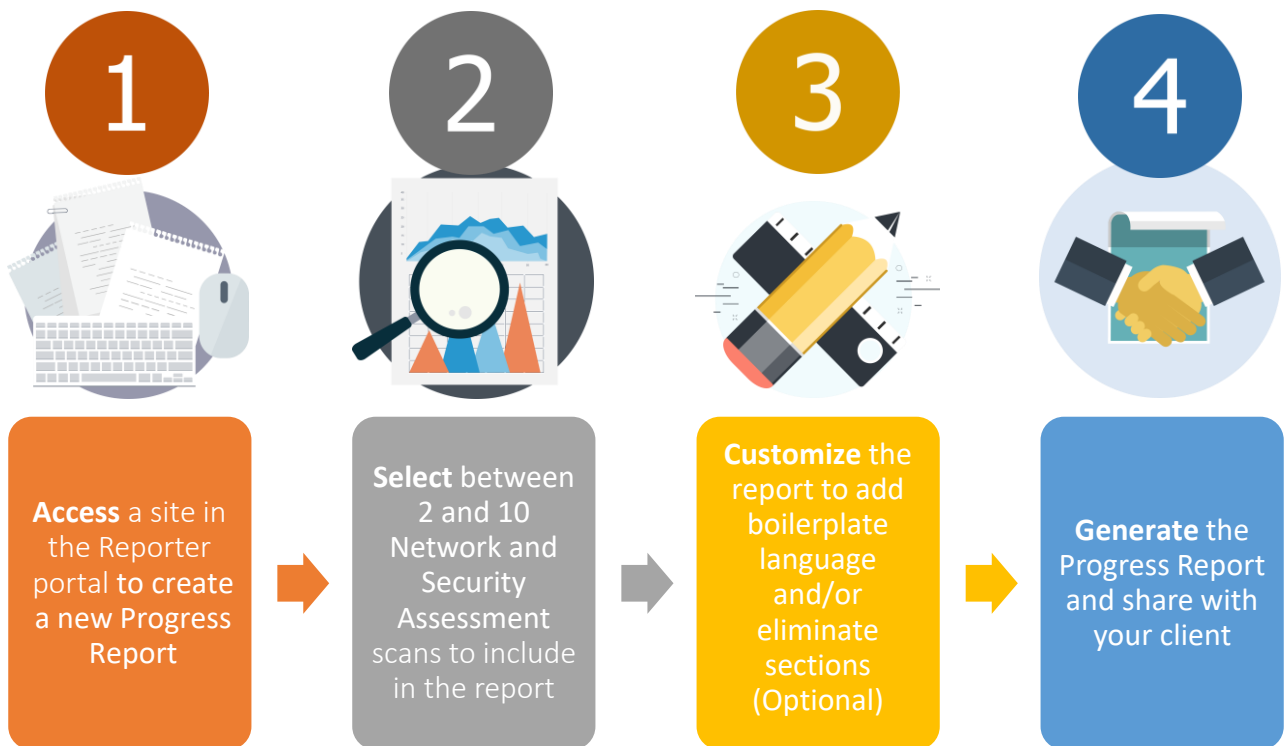

The Progress Report is available for Network Detective Pro users.

HOW IT WORKS

Progress Reports help MSPs prove their values by showing the positive impact on clients' systems over time.

Creating progress reports is simple:

1. **Access** the site
2. **Select** your required scans
3. **Customize** the report (optional)
4. **Generate** the report
